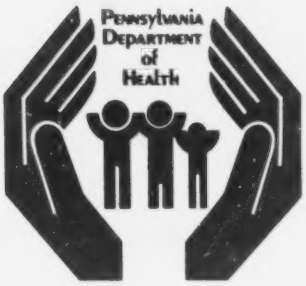
HEALTH PROFILES FOR PENNSYLVANIA COUNTIES



PENNSYLVANIA

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	44,966	Per Capita Personal Income (1977)	$7,001
Population (1978)	11,749,990	% of Population Receiving Public Assistance (1980)	6.8
Population per Square Mile (1978)	261	% of Labor Force Unemployed-Annual Average (1978)	6.9
% Population Change 1970 to 1978	-0.4		

Population by Age and Sex (1978)

	All Ages	0-4	5-14	15-24	25-34	35-44	45-54	55-64	65+
Male	5,614,147	364,538	933,134	1,108,901	767,389	607,274	647,102	595,588	590,225

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

ARMSTRONG

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

BERKS

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

BUCKS

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CAMERON

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the healtn of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 tc better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CHESTER

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	761	Per Capita Personal Income (1977)	$7,882

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CLINTON

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CUMBERLAND

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

ELK

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

FAYETTE

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	802	Per Capita Personal Income (1977)	$5,498
Population (1978)	155,864	% of Population Receiving Public Assistance (1980)	10.2

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

FULTON

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	435	Per Capita Personal Income (1977)	$4,377

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

INDIANA

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	825	Per Capita Personal Income (1977)	$5,556

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

LACKAWANNA

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	454	Per Capita Personal Income (1977)	$6,021
Population (1978)	232,167	% of Population Receiving Public Assistance (1980)	4.6

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

LEBANON

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	363	Per Capita Personal Income (1977)	$6,641
Population (1978)	106,462	% of Population Receiving Public Assistance (1980)	2.1
Population per Square Mile (1976)	293	% of Labor Force Unemployed-Annual Average (1978)	5.9

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

LYCOMING

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

MIFFLIN

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

MONTOUR

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

PERRY

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

POTTER

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

SOMERSET

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	1,078	Per Capita Personal Income (1977)	$8,015

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

TIOGA

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

WARREN

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	905	Per Capita Personal Income (1977)	$6,820
Population (1978)	45,822	% of Population Receiving Public Assistance (1980)	3.9

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

WESTMORELAND

1980

Health Data Center

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine and employ the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first county profiles were published in 1977 to provide a compendium of health data. These profiles were updated and revised in 1978 and now again in 1980 to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles - one for each county and one for the Commonwealth. The most recent available information was used. The year which the data represents is included in the profiles following each appropriate item.

The major data source is the Health Data Center, Bureau of Health Data Systems, Pennsylvania Department of Health - specifically the vital records and the facilities and manpower components of the Cooperative Health Statistics System. Additional sources include other units of the Department, the Governor's Office of Policy and Planning, the Pennsylvania Department of Public Welfare, the Pennsylvania Bureau of Employment Security, the U.S. Department of Commerce, and the Health Insurance Association of America.

The profiles will continue to be updated periodically. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the Division of Health Statistics, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania. (717-783-2548).

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	1,024	Per Capita Personal Income (1977)	$6,624
